Education

University of Auckland Expected: Nov. 2026

Bachelor of Science in Computer Science

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Databases, Software Development, AI
Certifications: Supervised Machine Learning: Regression and Classification, HackerRank: SQL Certificate
Awards: Outstanding Achievement – COMPSCI 235 Software Development Methodologies

Projects

Synapic – AI Study Assistant | *Python, React, FastAPI, PostgreSQL, synapicai.vercel.app* Mar. 2026 – Present

- Built and shipped a full-stack AI-powered study platform used by **50+** active users, **generating** flashcards, quizzes, summaries, and personalized study plans from uploaded notes and documents in under **3 seconds**.
- Engineered an automated note-to-quiz and note-to-flashcard **pipeline** using **Groq LLM APIs**, reducing manual study preparation time by over **70%**.
- Designed secure **authentication** and personalized user data storage with **Supabase/PostgreSQL**, supporting persistent study history, saved content, and user-specific learning workflows.
- **Deployed** production infrastructure on Vercel and Render with **CI/CD** pipelines and version control via GitHub, enabling reliable updates, rapid iteration, and **minimal downtime**.
- Currently expanding the platform with **retrieval-augmented generation (RAG)** for conversational chat over uploaded notes, and migrating infrastructure to **AWS** for improved scalability.

Recipe Web Portal | *Python, Flask, JavaScript, HTML/CSS, SQL, GitHub* Aug. 2025 – Oct. 2025

- Built a full-stack recipe platform supporting **10,000+** user-generated recipes with search and filtering by ingredient and cuisine, user accounts, reviews, and favourites, backed by **RESTful APIs** and a **relational schema** for data consistency
- Implemented user authentication and an automated test suite to catch regressions, collaborating in a team of **3** using Git branching workflows to **reduce** merge conflicts

Zombies (3D FPS Video Game) | *Unity, C#, Blender, Visual Studio* Mar. 2023 – Nov. 2023

- Developed a **3D first-person shooter** in a **team of 2**, implementing core **gameplay systems** including player movement, shooting mechanics, and collision detection.
- Designed a fully custom **UI/HUD** system and integrated game assets and animations in **Blender**, managing version control via **GitHub**.

Experience & Leadership

Oak Barrel Wine House Nov. 2024 – Present

Head Waiter / Bartender *Auckland, New Zealand*

- Improved service efficiency by over **25%** during peak hours by coordinating front-of-house operations across bar and dining areas serving **100+** customers per shift.
- Trained and **mentored 3+** junior staff members, cutting onboarding time by **approximately 30%**.
- Drove **upselling** and boosted customer satisfaction by maintaining high service standards, resolving real issues.

La Vista May 2023 – Aug. 2024

Waiter / Server *Auckland, New Zealand*

- Managed **10+** tables simultaneously in a fast-paced environment, maintaining order accuracy and consistent positive guest feedback.

Technical Skills

Languages: Python, C, Java, JavaScript, TypeScript, HTML/CSS, SQL, R, C#
Frameworks: React, Node.js, Flask, FastAPI, ASP.NET Core, CI/CD
Developer Tools: Git, Figma, MySQL, GitHub, VS Code, Unity, Blender, Supabase, Vercel, Render, AWS, Claude
Product Skills: Agile Methodologies, Object-Oriented Programming, REST APIs, AI/LLM Integration, Full-Stack Development, Data Analysis (SQL, Python, Excel), Wireframing, Roadmapping, Agentic Workflow
